

We Claim:

1. A door storage compartment for a refrigerator, the door storage compartment comprising:

at least one first section having a full first depth; and

at least one second section having a second depth being less than said full first depth and following said first section in a longitudinal direction of the door storage compartment, said second depth being less than half of said full first depth.

2. The door storage compartment according to claim 1, wherein said first and second sections have equivalent lengths.

3. The door storage compartment according to claim 1, wherein said first and second sections have different lengths.

4. The door storage compartment according to claim 1, wherein said first and second sections are formed as a one-piece part.

5. The door storage compartment according to claim 1, further comprising a intermediate wall, and said first and second sections are boxed shaped and separated by said intermediate wall.

6. The door storage compartment according to claim 5, wherein said intermediate wall has a horizontal reinforcing web.
7. The door storage compartment according to claim 6, wherein said horizontal reinforcing web forms an upper end of said intermediate wall.
8. A refrigerator, comprising:
  - a housing;
  - a door attached to said housing;
  - a first door storage compartment mounted on said door; and
  - a second door storage compartment mounted on said door above said first door storage compartment, said second door storage compartment containing at least one first section having a full first depth, at least one second section having a second depth being less than said full first depth and following said first section in a longitudinal direction of said second door storage compartment, said second depth being less than half of said full first depth.
